

Amoeba

Model Smarter, Morph Faster

DESIGN 6297 | Bo Li + Rui Liu + Shiyuan Tian+ Zijie Zhou as Whatever

DESIGN CHALLENGE

Traditional processes of **3D design iteration** in the Rhino and Grasshopper environments require manual adjustments and technical expertise, which can be **time-consuming and complex**. These challenges often hinder designers from focusing on creative exploration and experimentation, leading to a **slower innovation** process.

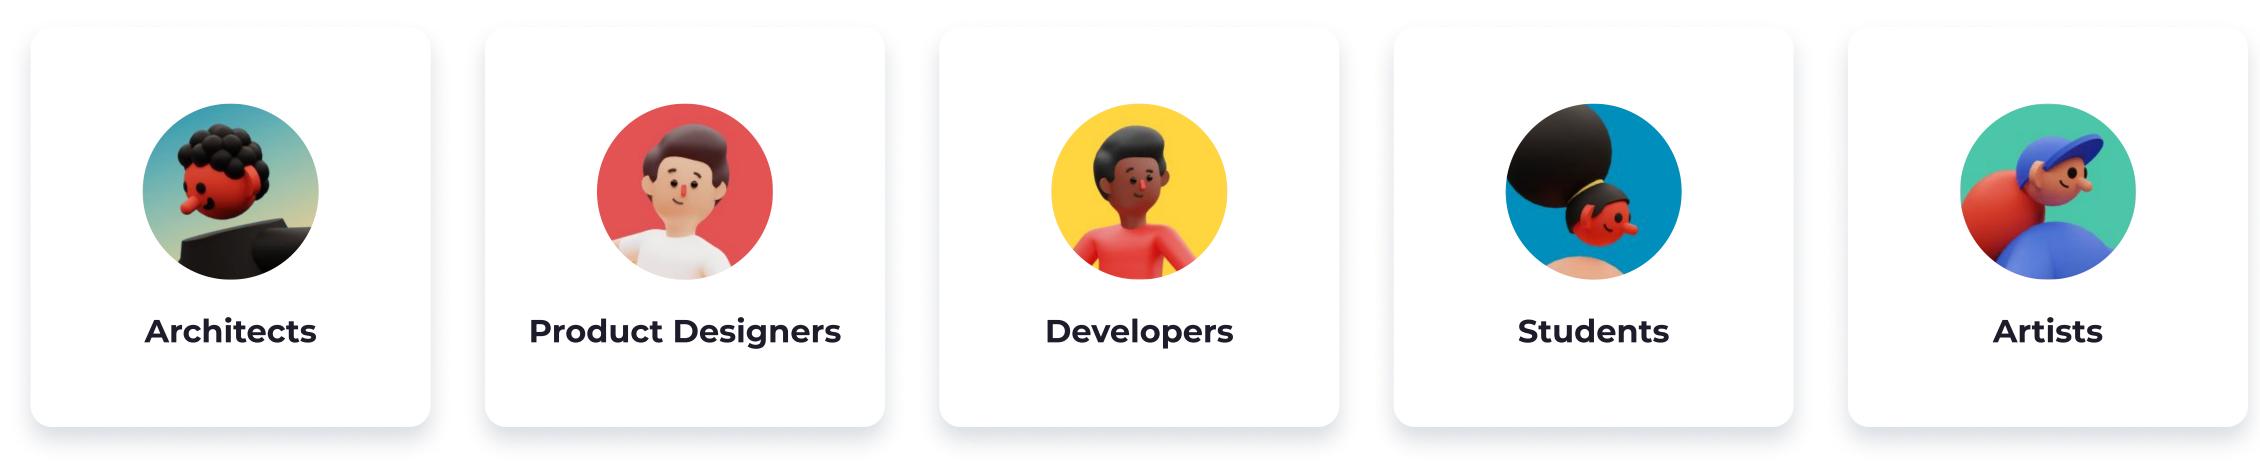

(?) HOW MIGHT WE:

empower designers to intuitively **explore creative possibilities** and generate innovative **design variations** to streamline the innovative 3D design iteration process?

DESIGN 6297 | Bo Li + Rui Liu + Shiyuan Tian+ Zijie Zhou

TARGET USERS

DESIGN 6297 | Bo Li + Rui Liu + Shiyuan Tian+ Zijie Zhou

GOAL:

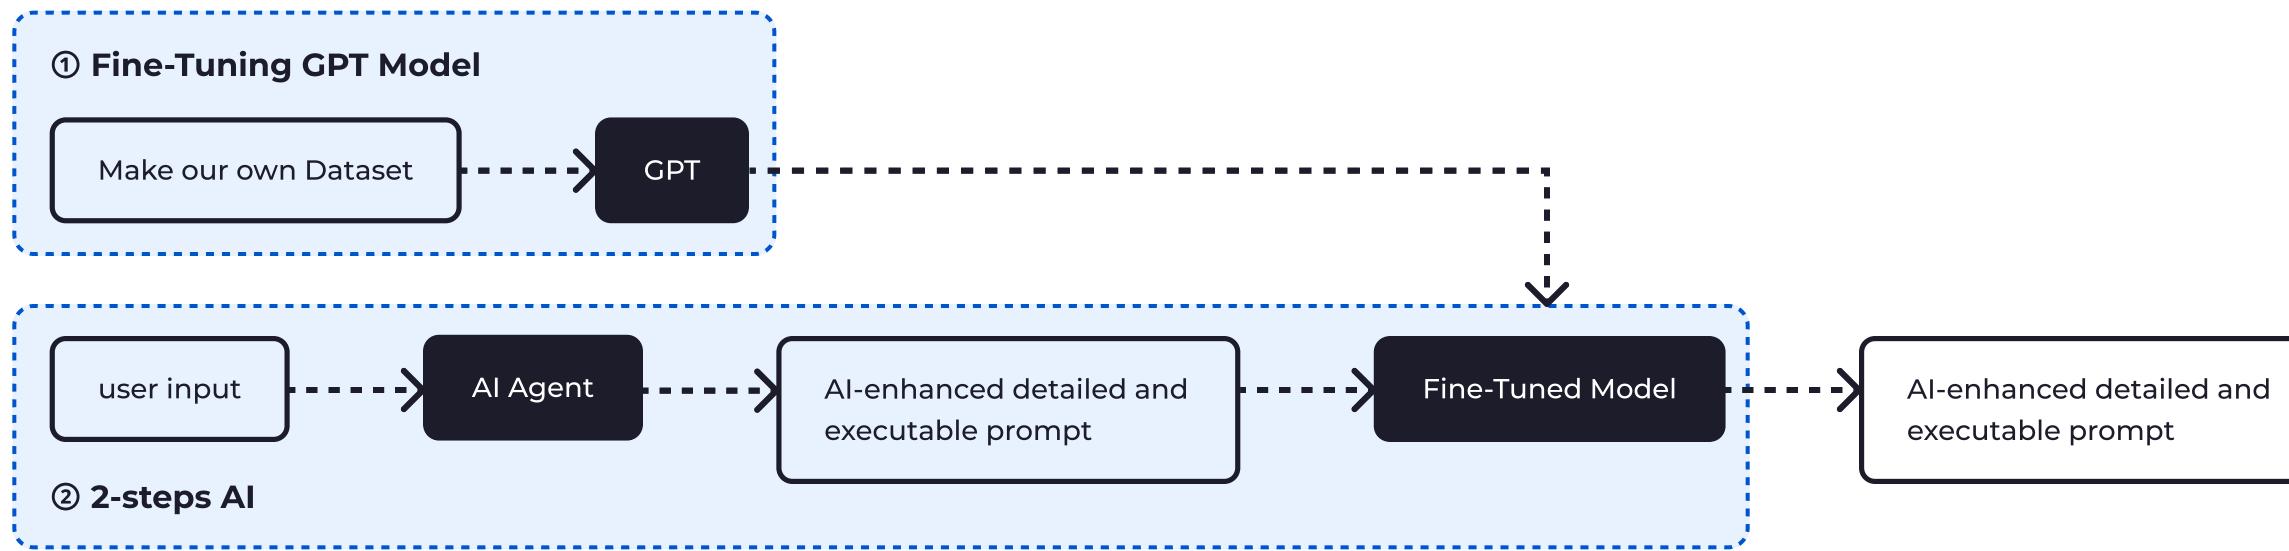

design variations, and introduces AI-generated outputs to spark fresh inspiration.

Ultimately, our solution frees designers from complex tasks, empowers them to experiment without constraints, and fosters a more fluid, innovative design process.

Our plugin - Amoeba, integrates a toolkit that fine-tunes GPT models within Grasshopper, and utilizes the fine-turned model to edit your existing model or generate variations.

The goal of this project is to enable users to **modify designs intuitively using natural language**. This reduces the barrier for translating abstract ideas into tangible models, accelerates the iteration of

OUR APPROACH - High level overview of plugin architecture

WORKFLOWS

Training Model: Data production + Fine-Tuning GPT

① Parametric Design Generation for data production

③ Dataset **Preparation** for Fine-Tuning Models

4 **Fine-Tuning** GPT Models for Customized Design Outputs

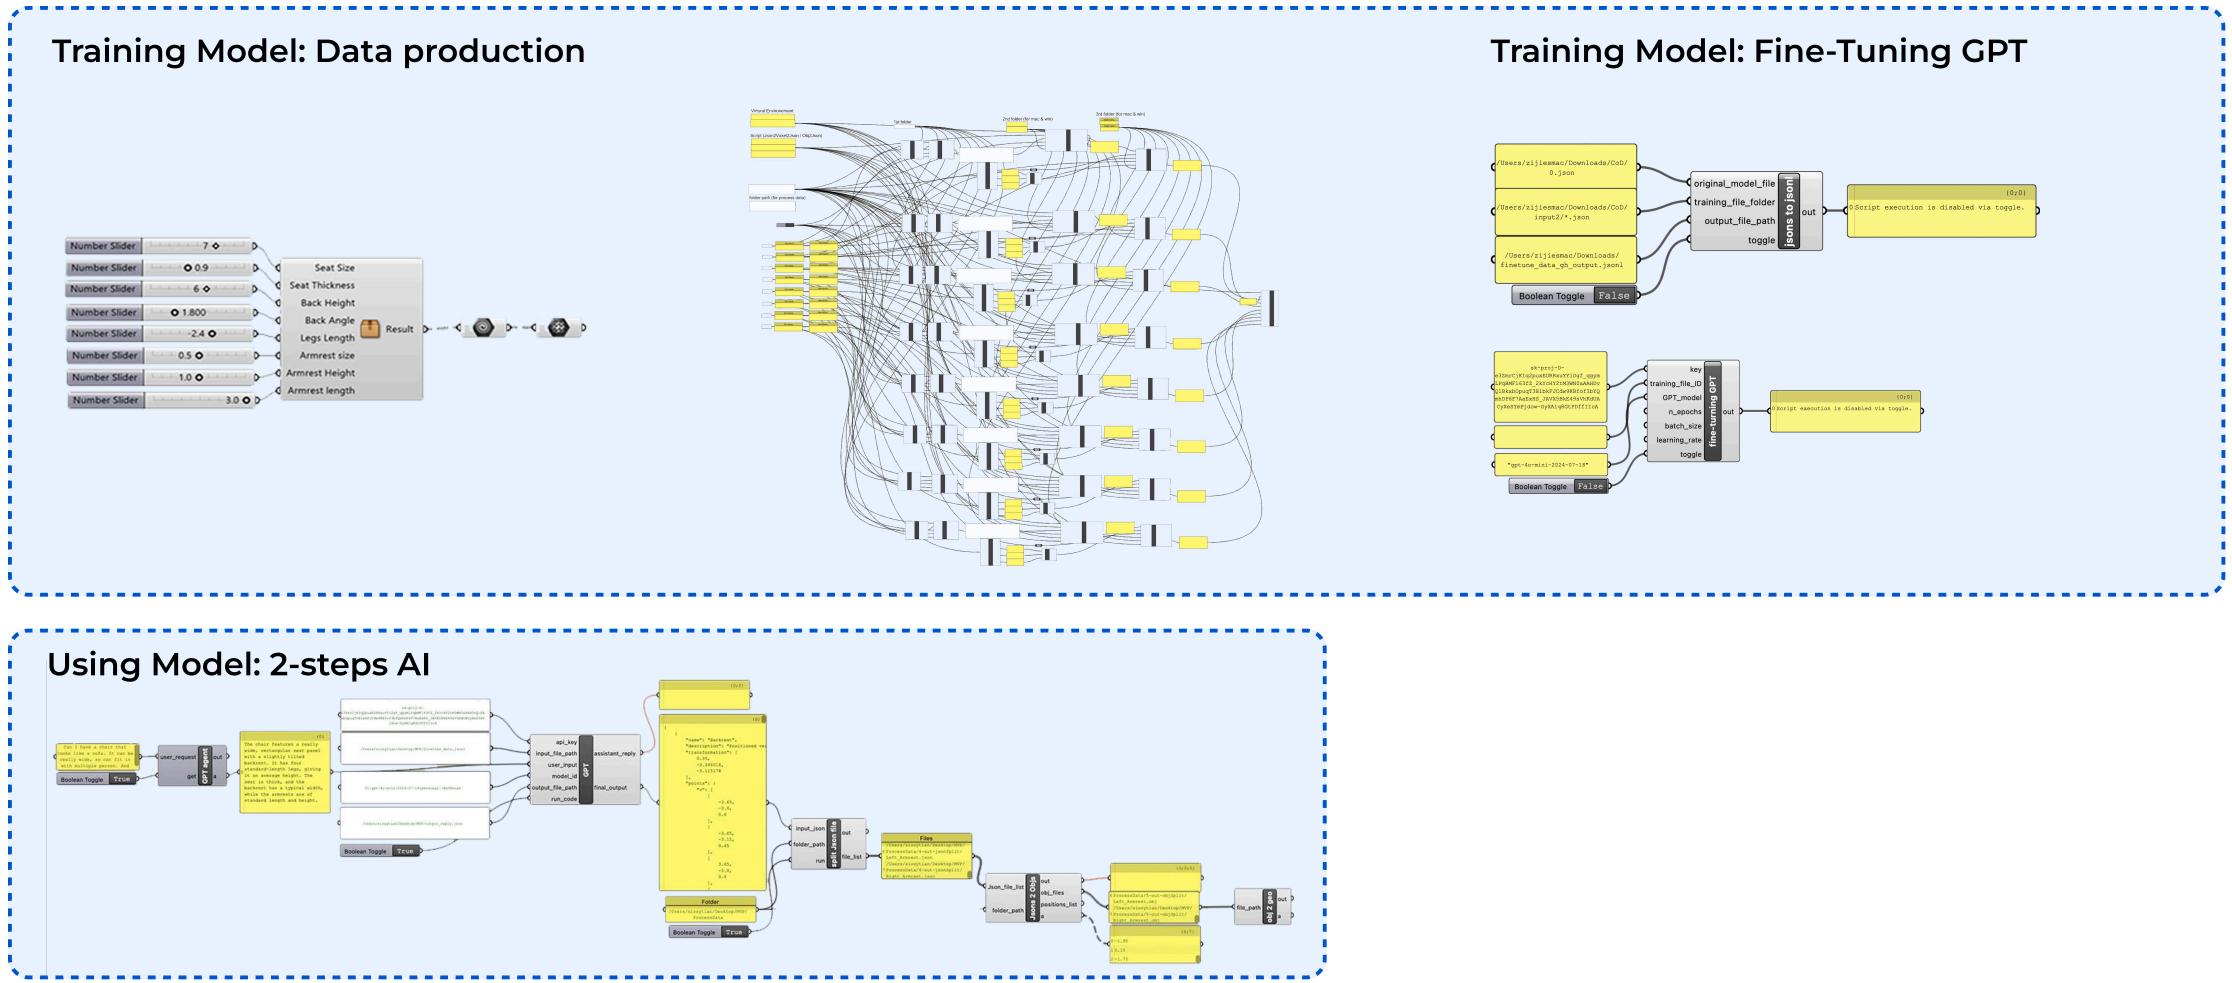

Using Model: 2-steps Al

5 Two-step AI process involving an AI agent and the fine-tuned model for Design Generation

⁶ Display the Al-generated design outputs as Geometry in Rhino

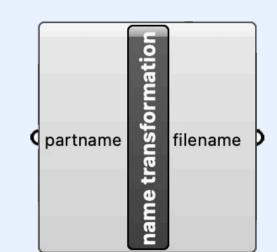

- 2 Data Generation and Semantic **Annotation** to Enhance LLM Understanding

Initial Explorations With Different 3D Data Types

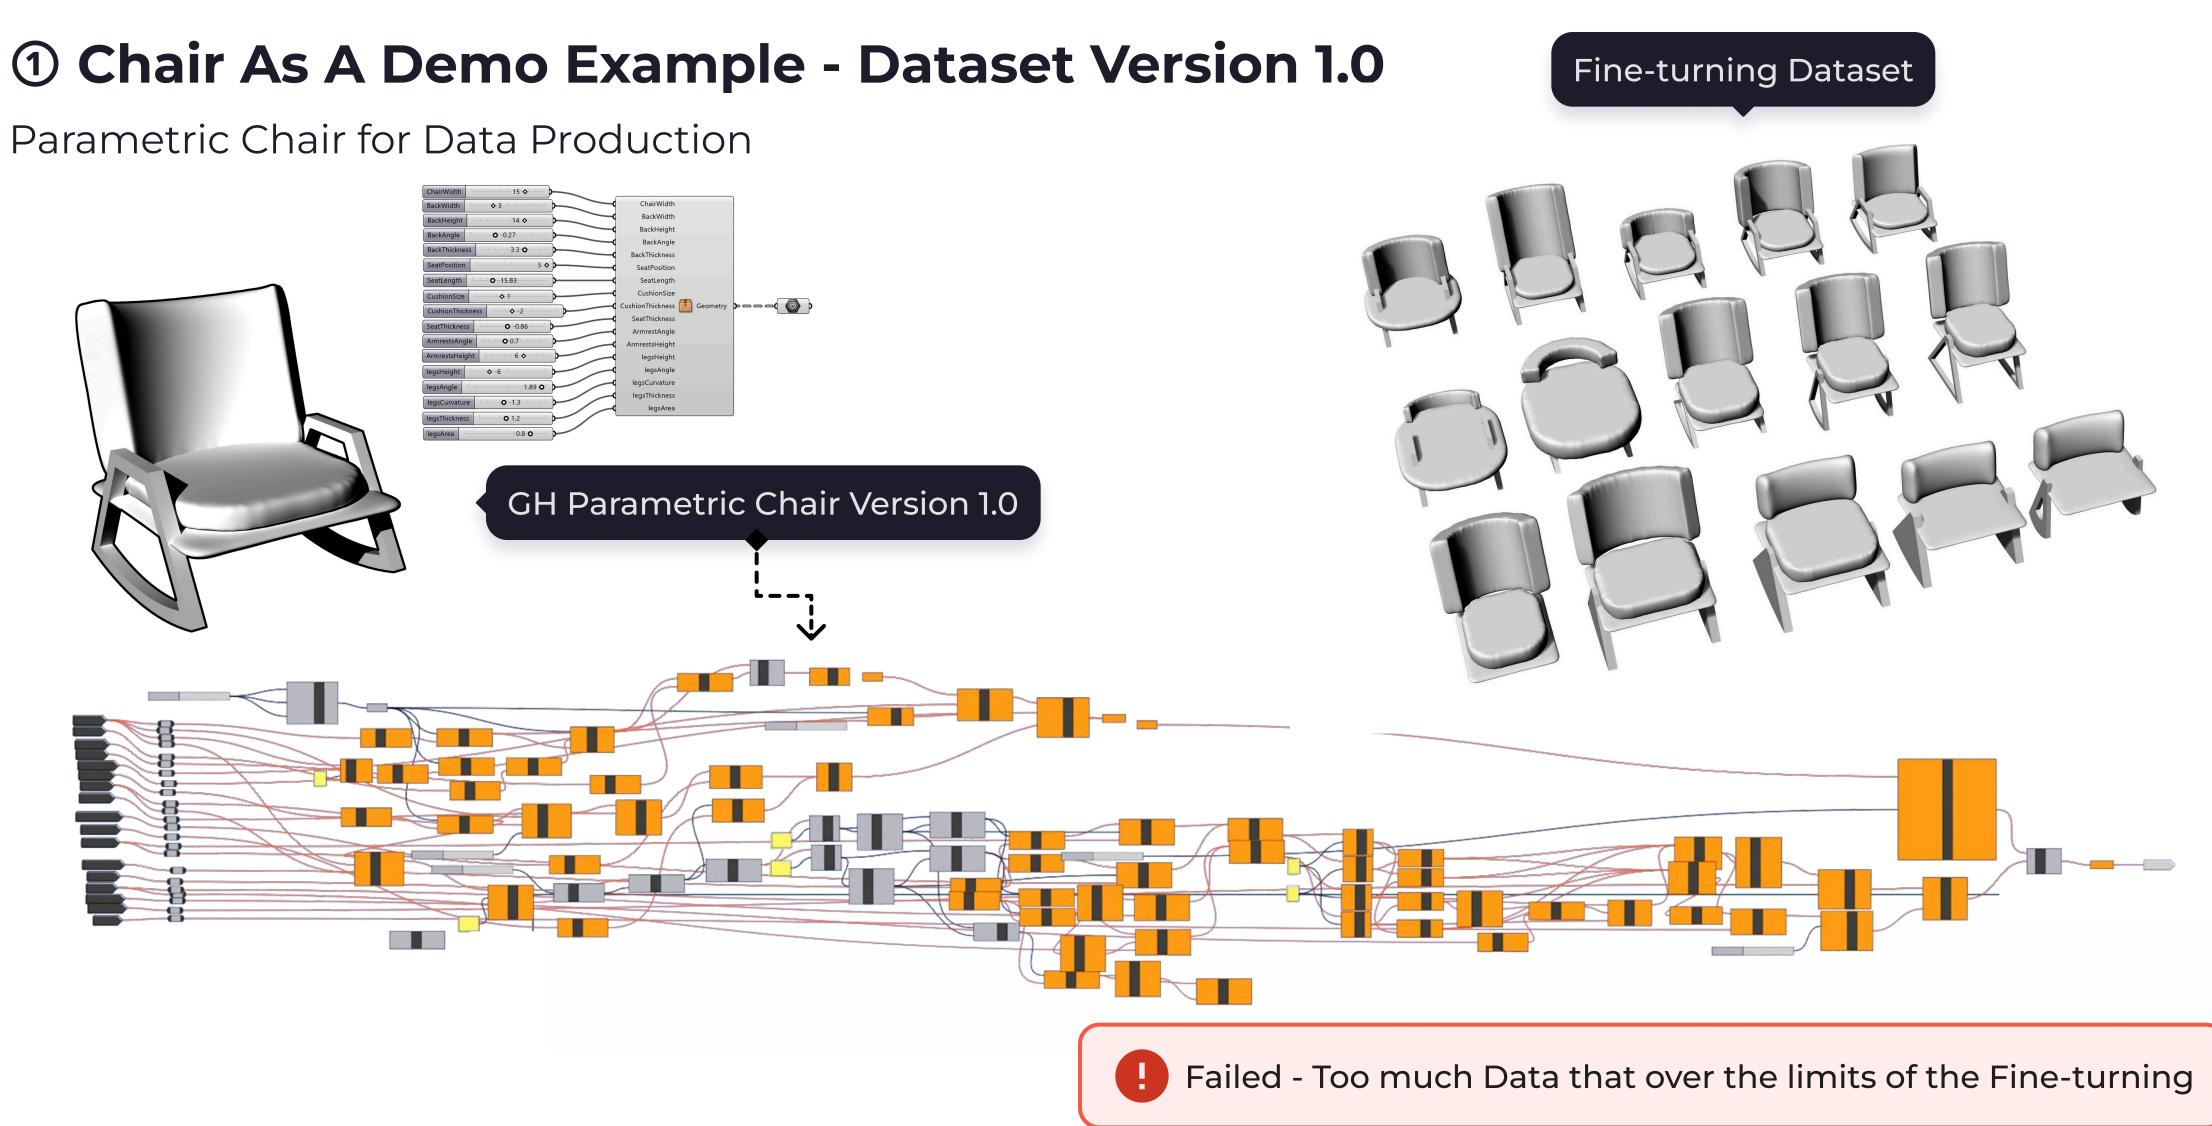

DESIGN 6297 | Bo Li + Rui Liu + Shiyuan Tian+ Zijie Zhou

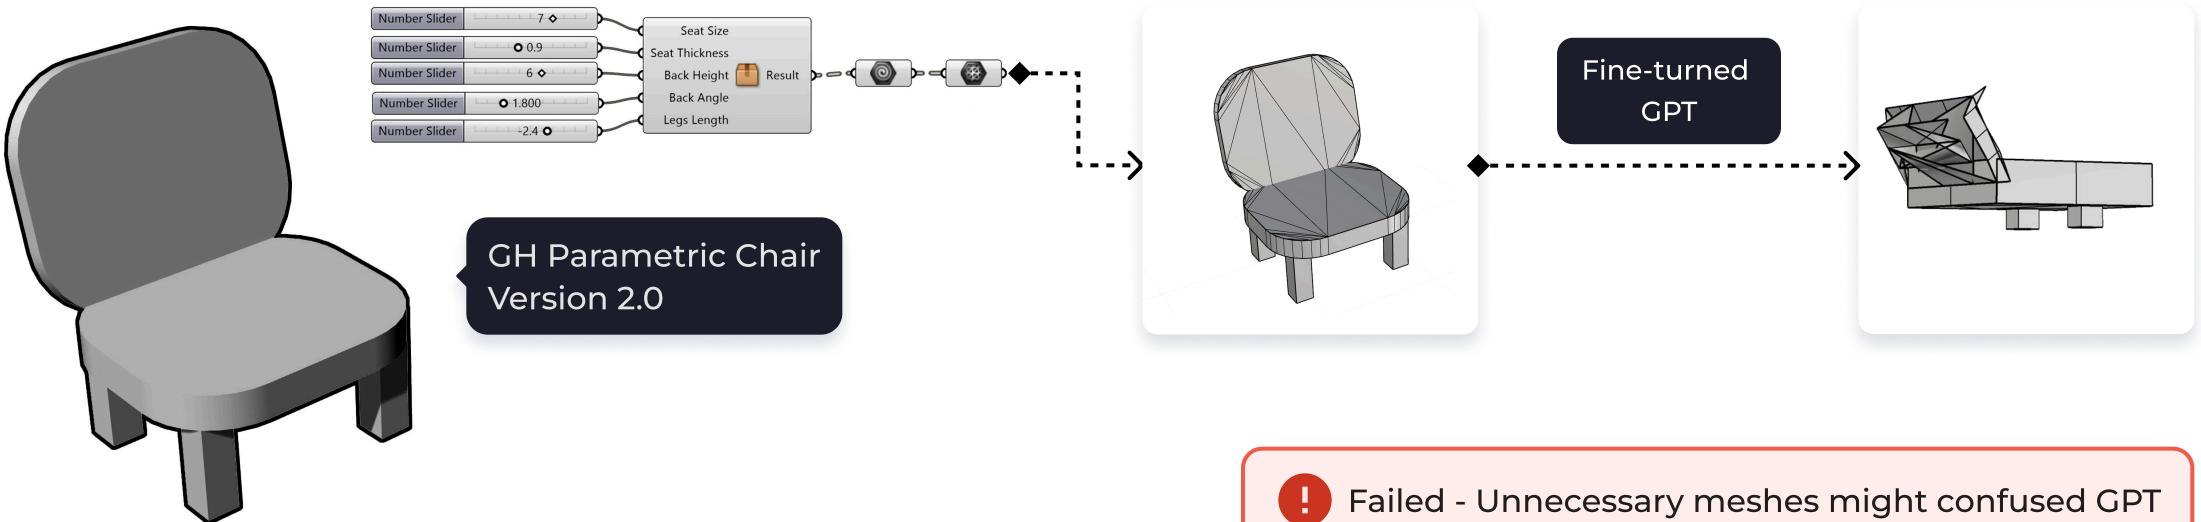

Parametric Chair for Data Production

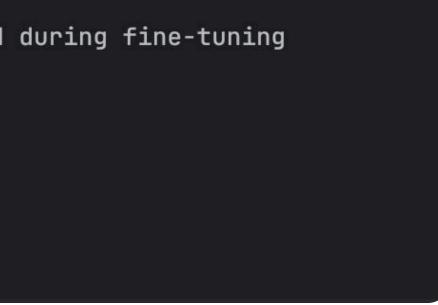

① Streamlining Data Iteratively - Dataset Version 2.0

1 examples may be over the 65536 token limit, they will be truncated during fine-tuning Dataset has ~65536 tokens that will be charged for during training By default, you'll train for 25 epochs on this dataset By default, you'll be charged for ~1638400 tokens

Process finished with exit code 0

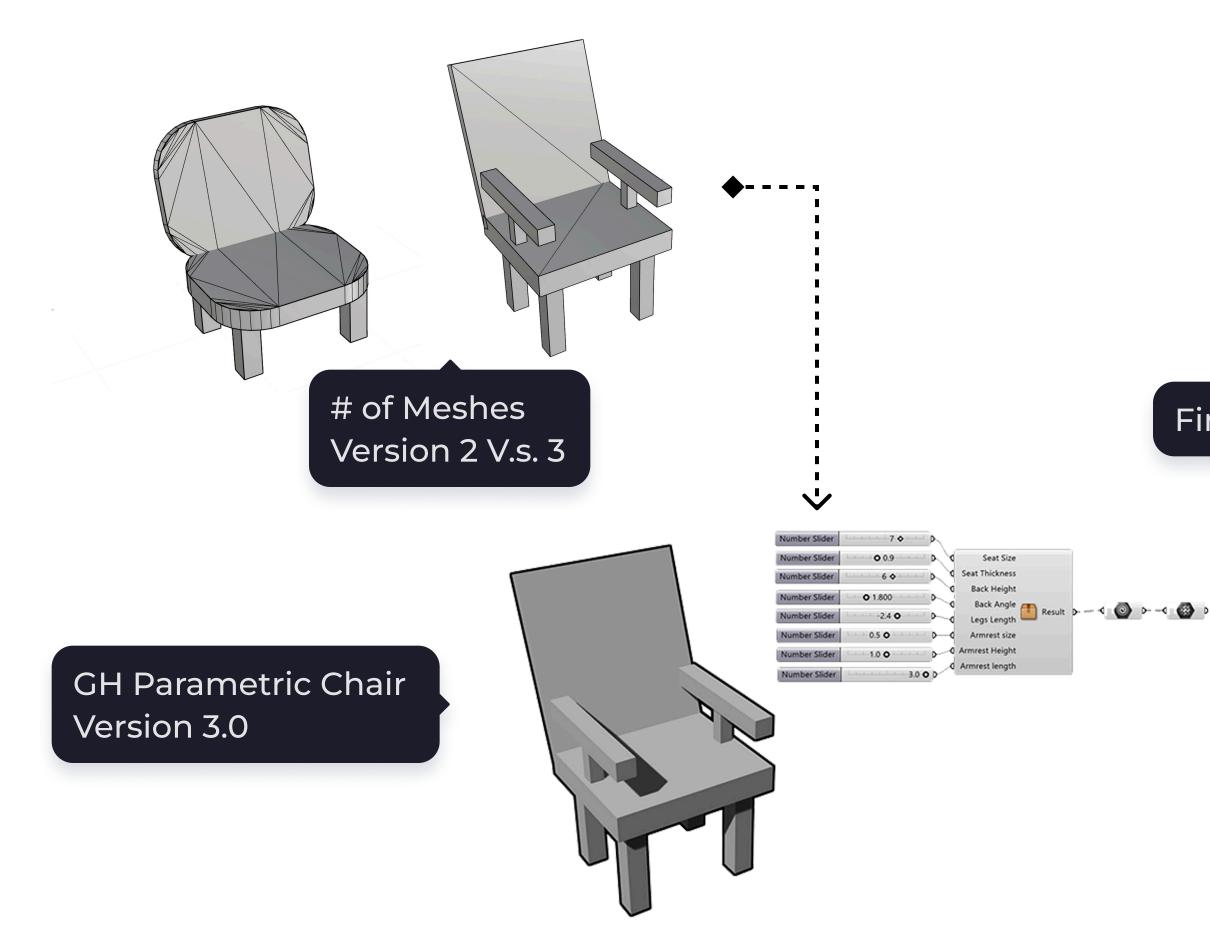

- **1. Minimum** number of **points** and faces for model training and ai analysis.
- 2. Enough variables to make it easy to create enough data to train the ai model.

② Generating Data - Dataset Version 3.0
